radial filters
angular windows ($\delta_0 = 0.05,\ \delta_1 = 1/3$)
the same windows against the angle
filter response
R_0 ($\sigma_0 = 0.5$)
R_1 ($\sigma_1 = 1$)
R_2 ($\sigma_2 = 2$)
R_{res}
$\sum_j R_j + R_{\text{res}}$
as implemented (sampled kernel)
$\|\mathbf{k}\|$ (rad/voxel)
A_0
A_1
A_2
$\sum_m A_m$
$|D(\mathbf{k})|$
magic angle 54.7°
polar angle θ of $\mathbf{k}$ w.r.t. B_0 (deg)
